South Africa: Gebr. Pfeiffer has started installing a MVR 3750 C-4 mill for a joint venture between Osho Cement and HeidelbergCement that is building a cement grinding plant at Port Elizabeth. The deal was agreed in 2017 and TCDRI is the general contractor. It is Gebr. Pfeiffer's first MVR mill in the country.

The new mill will be grinding 110t/hr of Ordinary Portland Cement (CEM I) to a fineness of 3500cm²/g Blaine and 80t/hr of blast-furnace cement (CEM III-A) to 4500cm²/g Blaine. A SLS 3750 BC classifier with high-precision cut will be mounted on top of the mill. The mill will have an installed power of 2600kW. It is intended to start operation later in 2018.
